10. Help and troubleshooting **16**

1. Getting started

Install and first run

1. Unzip **TinyMind.zip** into a folder you keep (for example *Documents\TinyMind*).
2. Double-click **TinyMind.exe**. If Windows SmartScreen warns, click *More info → Run anyway*.
3. The welcome wizard asks your name and how big the brains should be. *Standard* suits most PCs.
4. Start chatting. Everything you teach stays on your computer.

The main window: chat on the right, every feature in the side menu on the left.

Your 7-day free trial

- Everything works for **7 days**, free.
- For the **first 2 days**, all premium features are open too, so you can try everything.
- After 7 days, choose a plan (chapter 9). Everything you taught Arjun & Meera stays saved.

Meet Arjun and Meera

TinyMind has two AI friends, each with its own small neural brain that keeps learning from you. Choose who answers with the **Arjun** / **Meera** buttons at the top, or press **Ask both**. They are small AIs and can make mistakes: press **Correct me** under any answer to fix it, and they remember.

You type	What happens
my name is Ravi	They remember your name
capital of Japan = Tokyo	Teaches a fact (question = answer)
agent: plan a 3-day study timetable	Agent mode: thinks step by step and uses tools
learn from youtube: photosynthesis	Watches YouTube captions and learns them

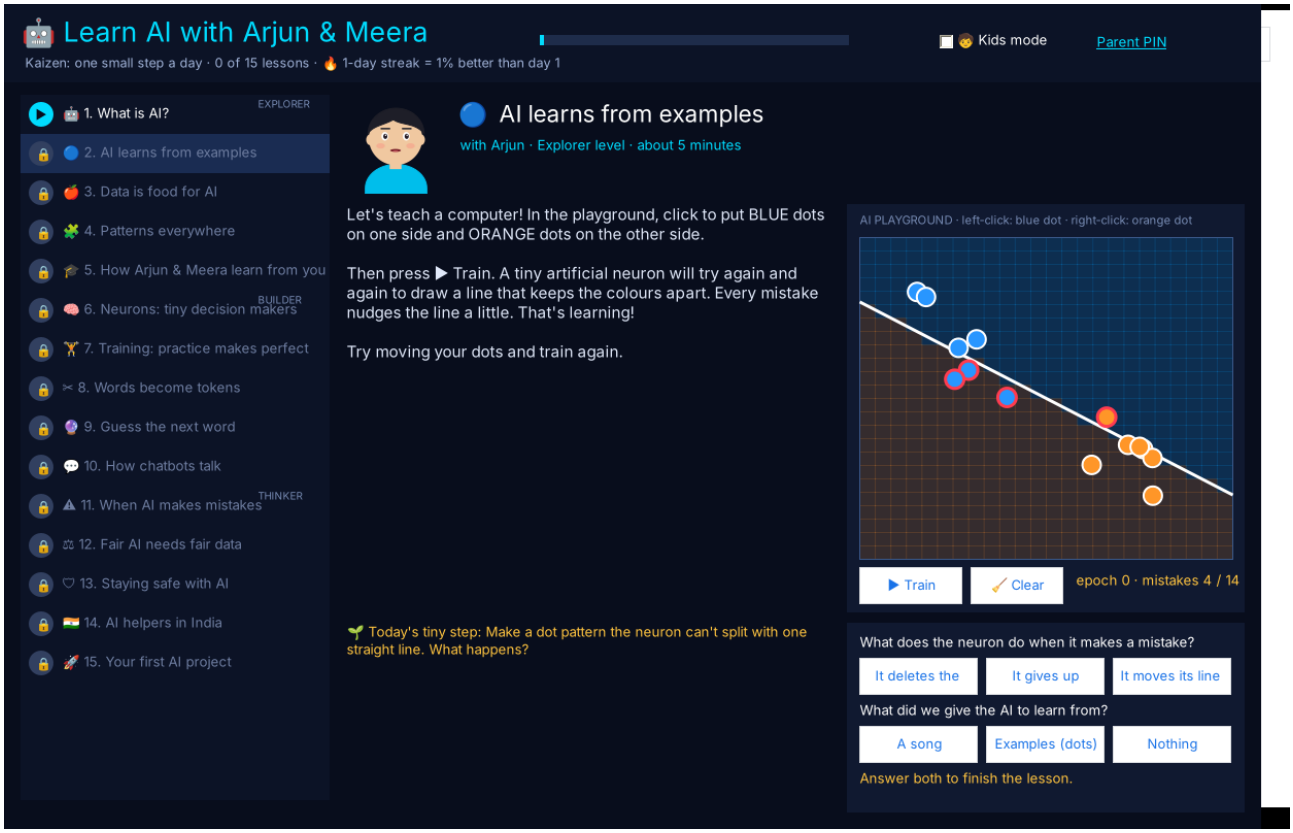

You type	What happens
play chess · learn ai with me · my progress	Opens chess, the AI course or your progress

2. Learning together

Learn AI with me (for kids and beginners)

A 15-lesson course in three levels (Explorer, Builder, Thinker), taught by Arjun and Meera. Each lesson takes about 5 minutes: a short story, a hands-on activity and a 2-question check.

- **AI playground:** left-click for blue dots, right-click for orange dots, press **Train** and watch a tiny neuron learn the line between them.
- **Token lab:** type a sentence and see how an AI cuts it into tokens.
- **Next-word game:** a mini language model guesses the next word; teach it new sentences.
- **Kaizen rule:** one new lesson a day so it sticks. You can review finished lessons any time, and a grown-up can open the next lesson early.

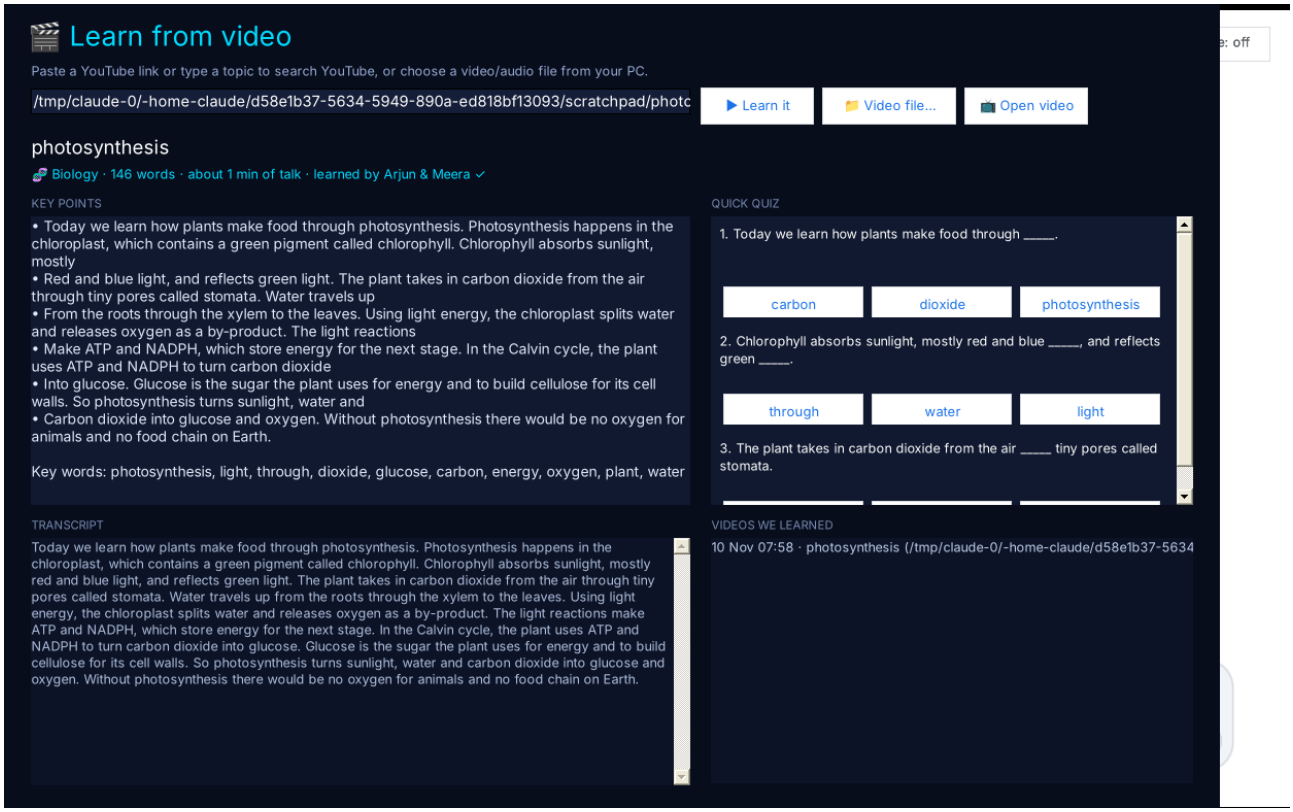

Learn AI with me: the AI playground in lesson 2.

Learn from video

Open **Learn from video**. Paste a YouTube link or type a topic, or press **Video file…** to choose a video or audio file from your PC.

- TinyMind reads the captions or subtitles (or turns speech into text when ffmpeg and Whisper are set up).
- Arjun & Meera learn the video, and you get its subject, key points, key words and a 3-question quiz.
- **Open video** plays it in VLC or your browser.

Learn from video: subject, key points and a quick quiz.

Files, books, YouTube, arXiv and the web

Use the **Learning Center** to drop in PDFs, Word, PowerPoint, Excel, e-books, code, images and videos, to read arXiv research papers, or to switch on background learning. Built-in lessons include ASCII, assembly language, the creator's research papers, and **Olympiad Maths and Reasoning**: invariants, parity, pigeonhole, induction, modular arithmetic, AM–GM and worked problems.

3. Dashboards

Command Center

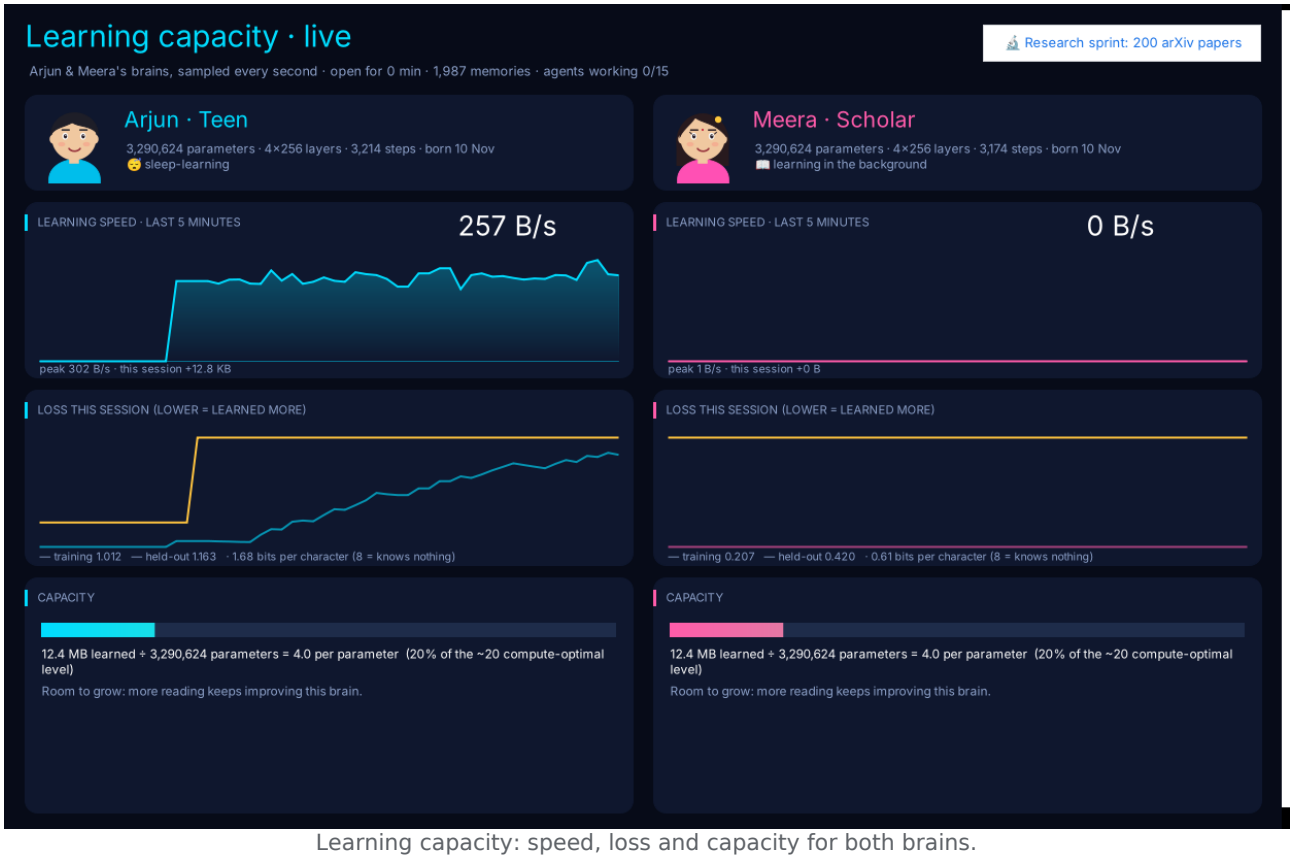

The futuristic overview: both brains growing from Newborn to Adult, the 15 agents, the live learning feed, the system and the GGUF big brain. Every feature is one click away on the icon rail at the left.

The Command Center.

Learning capacity (live)

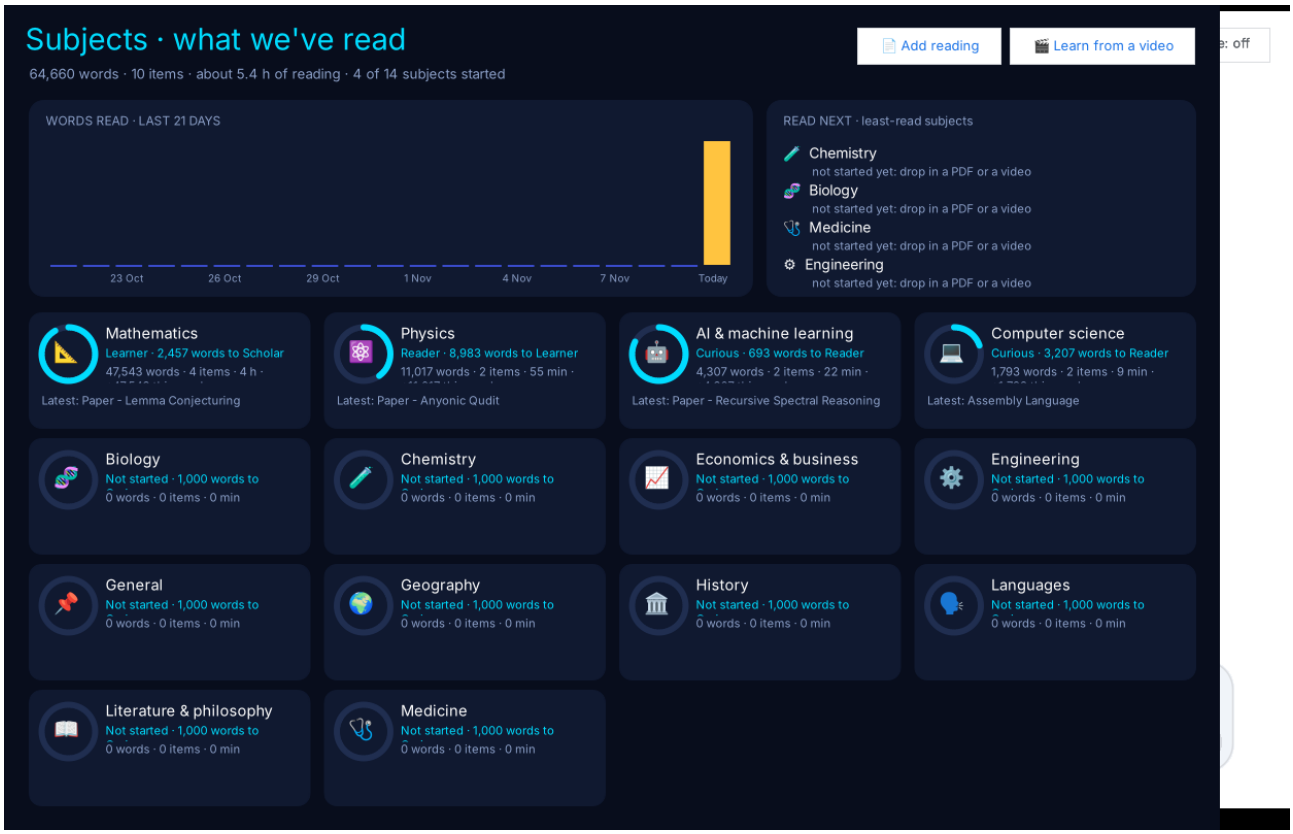

- One column each for Arjun and Meera, updated every second.
- **Learning speed** over the last 5 minutes.
- **Loss** this session: training and held-out, and bits per character (8 means it knows nothing; lower is smarter).
- **Capacity:** how much each brain has read per parameter, against the well-known compute-optimal level of about 20 per parameter (Hoffmann et al., 2022).

Learning capacity: speed, loss and capacity for both brains.

Subjects: what we've read

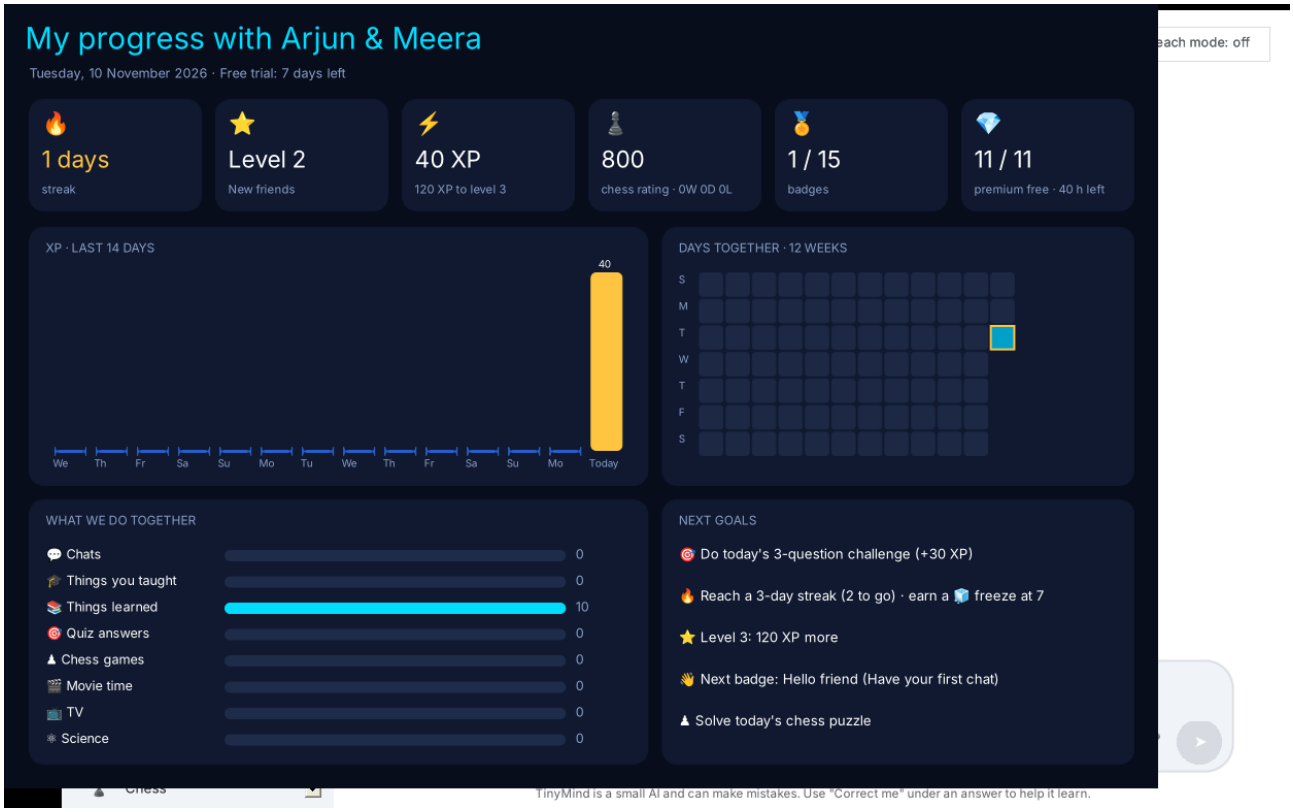

Everything they read is sorted into 13 subjects. Each card shows words read, items, reading time, this week's reading and a reading level, from *Curious* up to *Legend*. **Read next** lists the least-read subjects.

The subject-wise reading dashboard.

My progress

Your streak, level, XP for the last 14 days, a 12-week activity calendar, what you do most together, your chess rating and your next goals.

My progress.

4. Agents, care team and research

The 15 agents

Fifteen named agents (Aarav, Diya, Kabir, Isha, Rohan, Anaya, Vihaan, Saanvi, Arnav, Myra, Reyansh, Kiara, Ishaan, Tara and Dev) learn in parallel and talk to each other about what they learned. Agents only read and learn: they never run programs or change your files.

The care team

Five agents look after Arjun & Meera so they grow up faster. Every 10 minutes, when you're not chatting, the next caretaker does its job:

Agent	Job
Aarav · revision tutor	Re-teaches 20 older lessons so nothing is forgotten
Diya · subject coach	Feeds the least-read subject from the built-in lessons
Kabir · health checker	Watches the held-out loss; if it gets worse, books an extra revision
Isha · curiosity scout	Reads new arXiv papers on the weakest subject (Internet tools on)
Rohan · diary writer	Writes a diary of today's learning and teaches it to both brains

Switch the team on or off, or press **Care now**, on the Learning capacity dashboard. The care log is shown there.

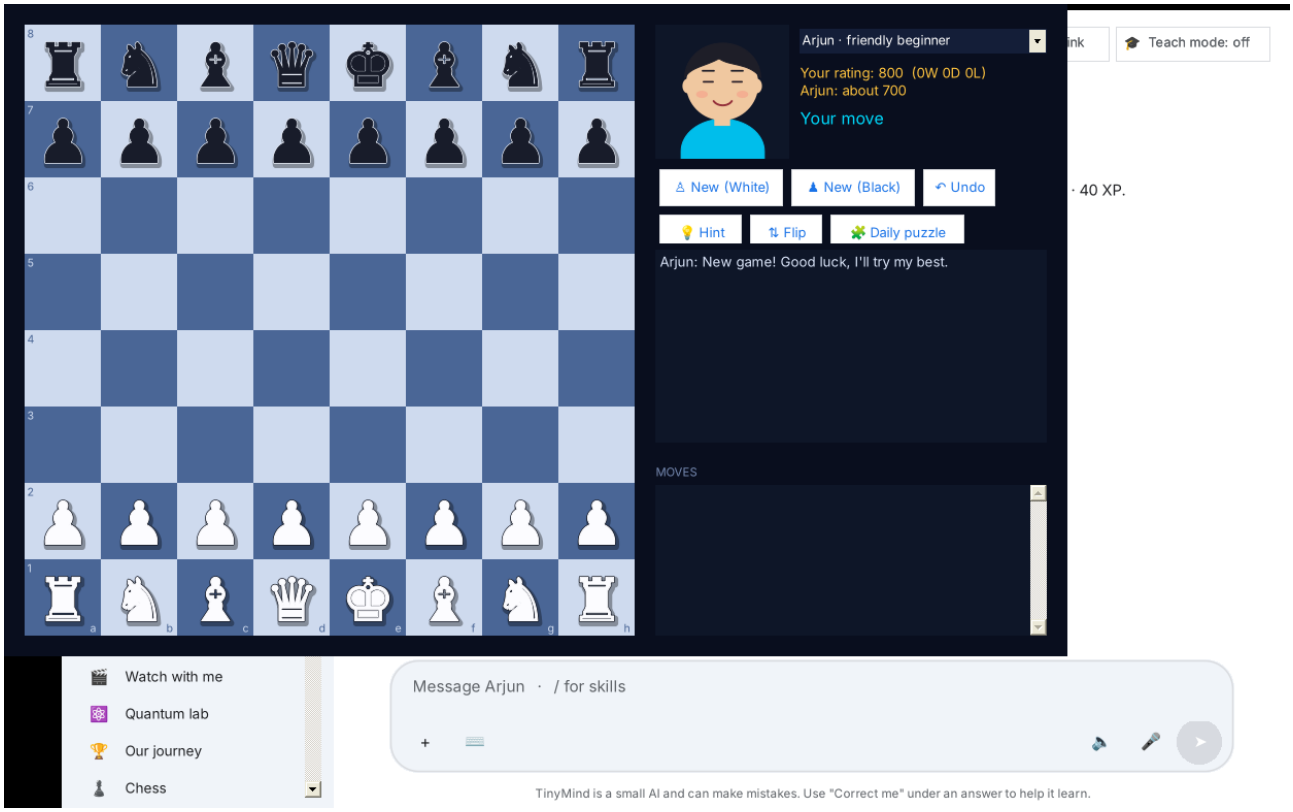

Research sprint

On the Learning capacity dashboard, **Research sprint** queues 10 agents to read 200 arXiv abstracts about robust learning: continual learning, curriculum learning, calibration, distillation, hallucination detection, retrieval and more. It needs Internet tools on.

5. Fun together

Chess with Arjun & Meera

- **Arjun** is a friendly beginner; **Meera** plays a strong club-level game; **full strength** thinks longer.
- You can also choose any UCI engine, such as Stockfish (free and open source), as the opponent.
- Click a piece, then a highlighted square. **Hint**, **Undo** and **Flip** help while you learn.
- Your rating goes up and down with each game.
- **Daily puzzle:** a new checkmate in 2–3 moves every day, found automatically by the engine.

Chess with Arjun.

Watch with me (VLC)

Choose a movie that has subtitles. It plays in **VLC** (free, open source; one-click install with **Get VLC**), and TinyMind follows VLC's clock exactly, even when you pause or skip. You see each line with a Hindi translation, and Arjun & Meera comment every 3 minutes.

Live TV

Over 2,200 free, legal channels from 100+ countries, with India first. Search, save favourites or add your own playlist. Channels play in VLC or in a browser player. Some channels may be offline or blocked in your country.

Our journey

Daily streak, levels, 15 badges and a daily 3-question challenge. Every 7 days of streak earns a **streak freeze** (up to 2), which saves your streak if you miss one day. An evening reminder (7:30 pm, changeable in Settings) helps you keep it.

6. Big brain, models and tools

TinyMind runs GGUF and .xfx models offline with its own built-in engine: no Ollama or llama.cpp needed. Put a model in the **models** folder, or open **Big models** to load one. With a big brain loaded, answers, translations and video summaries get much better. Other tools:

- **Agent mode** (thinks step by step and uses tools)
- **Multiple chat windows**
- **Hallucination benchmark**
- **Transformer lab**
- **Quantum lab**
- **Projects**
- **Export chat** (PDF, Word, Markdown or text)

7. Kids mode and parents

Turn on **Kids mode** in *Learn AI with me* and set a 4-digit **Parent PIN**. In kids mode:

- Buying any feature or plan needs a grown-up (PIN, or a multiplication question if no PIN is set).
- Live TV and movie mode need a grown-up.
- Turning kids mode off needs a grown-up.
- Lesson 13 teaches online safety: never share your address, school, passwords or photos, and tell a grown-up if something online is worrying.

Privacy
TinyMind keeps what children teach it on your own computer. It has no accounts and no ads inside the app.

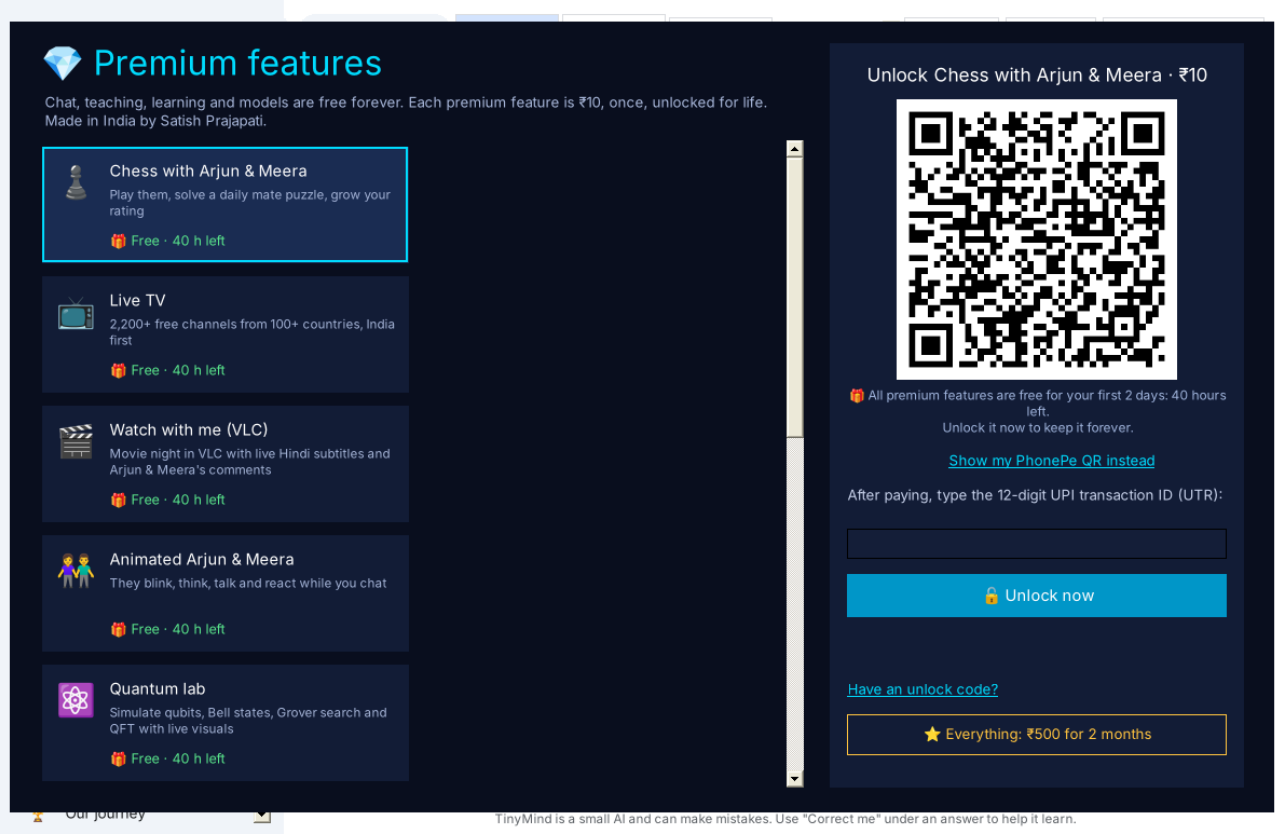

8. Premium features

There are 11 premium features, each ₹10 once and unlocked for life:

- Chess
- Live TV
- Watch with me
- Animated Arjun & Meera
- Quantum lab
- Transformer lab
- Hallucination benchmark
- Mind dashboard
- Export chat
- Multiple chat windows
- Projects

Each feature also has one free try, and all of them are free during your first 2 days. A plan unlocks all of them.

1. Open **Premium** and click the feature you want.
2. Scan the QR with GPay, PhonePe, Paytm, BHIM or any UPI app. The ₹10 and the feature name are filled in for you. UPI ID: **8981341071-2@axl**.
3. After paying, type the 12-digit **UPI transaction ID (UTR)** from your UPI app and press **Unlock now**.
4. Have an unlock code from the creator? Use **Have an unlock code?**

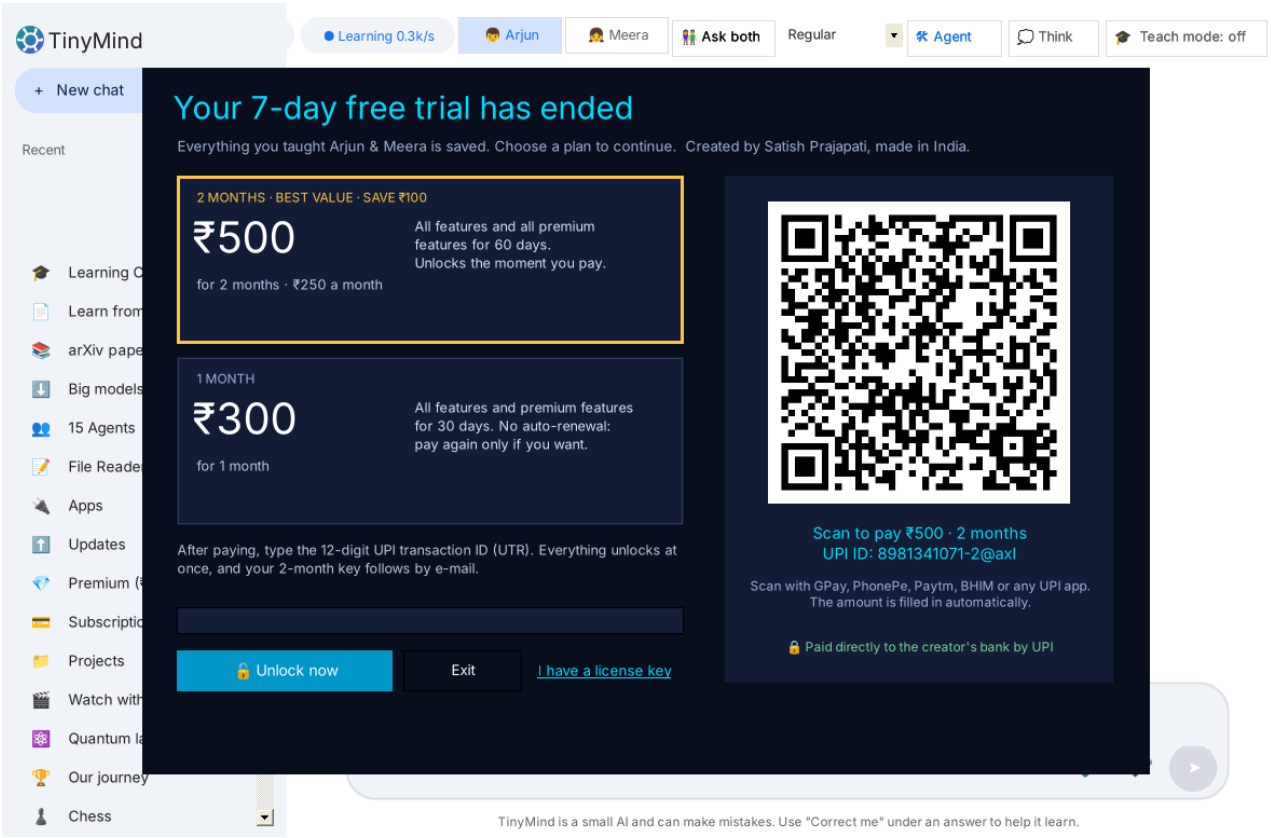

The premium window with the payment QR.

9. Plans and payment

Plan	Price	What you get
2 months (best value)	₹500 (₹250 a month)	Everything, including all premium features, for 60 days
1 month	₹300	Everything, including all premium features, for 30 days

1. After the trial, or any time from **Subscription**, choose a plan and scan the QR.
2. **2 months:** type your UPI transaction ID. Everything unlocks at once. E-mail the transaction ID and your name to iamsatish.gcect.ac@gmail.com, and your 2-month key arrives within 24 hours.
3. **1 month:** e-mail the transaction ID, then paste the license key you receive.

There is no automatic renewal: you pay again only if you want to.

Choosing a plan.

10. Help and troubleshooting

Problem	What to do
An answer is wrong	Press **Correct me** under it and type the right answer
Video says “no captions”	Try another video, or download it and use **Video file…**
A TV channel doesn't play	Some channels go offline or are blocked in some countries: try another
Movie subtitles are early or late	Use the back/forward 5 s, or play in VLC for exact sync
The PC feels slow	Settings → learning speed *Gentle*, or close the dashboards
Paid but not unlocked	Type the 12-digit UTR exactly, or e-mail iamsatish.gcect.ac@gmail.com

Backup
Your knowledge lives in the *data* folder next to TinyMind.exe. Copy that folder to back up Arjun & Meera, or to move them to a new PC.
